Sun innovative offers: **SUN SERVICE ORIENTED ARCHITECTURE TECHNICAL SOLUTION WORKSHOP**

BUSINESS BENEFITS

- > See the business value of Service Orientated Architecture (SOA) for your enterprise
- > Map Sun technology onto your infrastructure and see how it meets your requirements
- > Understand what's needed to architect the solution, with hands-on experience building integration, end to end
- > Visualise the skill sets and resources required
- > See how to scope the various stages of implementation

MAKING SERVICE ORIENTATED ARCHITECTURE A REALITY

Sign up for a one-day workshop where key technical members of your project team will see how the Java Sun Composite Application Platform Suite (CAPS) can address your requirements. We'll provide the valuable technical answers you need – using interactive presentations, working solutions, demonstrations and business scenarios.

TECHNICAL SOLUTION WORKSHOP DELIVERABLES

Industry analysts are talking about the business value of Service Orientated Architecture (SOA) ... but how do you make it a reality? This workshop is your opportunity to see how an open SOA-based solution can support your projects and increase satisfaction levels among your customers and partners.

Our technical professionals will guide you through the process of implementing an open SOA-based integration framework for your enterprise. We build a working solution so you can visualise the skills and resources needed to leverage the true value. We can usually include simulations of your applications – to demonstrate how a prototype could meet your requirements.

TECHNICAL SOLUTION WORKSHOP PRE-REQUISITES

To make the workshop a success, we need advance details of your current architecture, platforms, applications and interfaces, as well as at least one high-level business process critical to the project. We'll agree the agenda with you, prior to the workshop.

WHO SHOULD ATTEND?

It's essential that key technical people involved in the evaluation and selection criteria of your solution should attend for the whole day, while key business people should attend the 'introduction' and 'delivery' sessions. Everyone will benefit from a deeper understanding of how Sun's solutions offer a unique response to the challenges of A2A, B2B and Business Process Integration.

LOCATION AND DURATION

The workshop takes one full day. It can be held at any Sun office or another location of your choosing, with suitable meeting space and data projection equipment. When a workshop is held at our offices, we include a tour of our exclusive Solution Centre. This technically-advanced business value demonstration suite incorporates many industry-standard integration components and a range of third party applications, including workflow, SAP, Siebel Systems, AS400 and OS/390 mainframe systems.
